About aE

Origin

Ayers Electronic Systems, LLC (aE) was founded in February 2008 to develop and provide world class standards-based products and services to the transportation industry.

What We Do

aE applies technology to address issues and solve problems faced by ground transportation industries and agencies. We provide tools and services to facilitate information exchage and management, systems engineering, testing, and training tailored to individual projects.

Our Advantage

aE presents a unique range of capabilities and services that include standards-based ITS (Intelligent Transportation Solutions) applications, intimate familiarity with the latest railroad technologies, proven comprehensive testing, training services, and communications solutions.

How We Can Help

Engineering Solutions

Our engineers design, develop, integrate, and test complex, distributed, mission critical systems. This background provides us the skills and capabilities needed to help specify your system's requirements and to verify that those requirements are met in complex integrated systems.

Communications Solutions

aE's communications solutions make sure your data is where you want it, when you want it, the way you need it. We understand that today's mobility makes it essential to your business that you have the most flexible communications solutions available.

Intelligent Transportation Solutions

aE provides ITS solutions including Computer-Aided Dispatching (CAD) and Passenger Information Systems for vehicles, stations, and fixed applications. We also provide Location-Targeted Advertising Systems.
